Frontend-led full-stack engineer with **20+ years of hands-on development** (coding since 2001) and **15+ years shipping production software** for clients and for my own products. I lead the frontend architecture of **Kaast**, a multi-tenant media platform used by **4,000+ people across 5 companies**, founded **Synqit**, and have delivered **11 web, mobile and back-office products end to end**. I work AI-first: agents are wired into my delivery stack and governed by guardrails I built, so I ship at the pace of a small team with the rigour of a larger one — while architecture, review and ownership stay firmly human.

AI-AUGMENTED ENGINEERING

- **Daily agentic development** with Claude Code, OpenAI Codex and Cursor — prototyping, refactors, test writing, code review and documentation. AI-assisted, never blindly delegated.
- **MCP integrations** connecting agents to the real delivery stack — GitHub, Linear, Supabase, Vercel and a live browser — so they read issues, inspect databases and deployments, and verify UI changes before I review them.
- **Built claude-team-kit**, reusable Claude Code scaffolding installed across my repositories: a read-only git/PR guard agent, a test gate that ties green tests to the exact committed tree (hashed receipts), and an agent forge to create and retire specialised agents safely.
- **Agent-ready repositories**: CLAUDE.md / AGENTS.md conventions, user stories and specs so AI contributions follow the architecture instead of drifting.
- **LLMs in production**: Claude API receipt scanning (photo → structured inventory lines) in the Sou des Écoles operations back office.

EXPERIENCE

SYNQIT

Founder & Product Engineer

2024 — present

Collaborative event playlists and cross-service playlist sync (Spotify, Apple Music, TIDAL, YouTube Music, Deezer). synqit.fr

- Designed and built the whole product: Fastify modular monolith with BullMQ workers, Prisma/PostgreSQL data model, React 19 web app, Expo iOS/Android app and a Mantine back office.
- Sync & transfer engine with ISRC-first track matching, snapshot-based change detection and per-track checkpoints that resume after provider quota limits.
- Stripe billing (web Checkout, mobile Payment Sheet) granted only through idempotent webhooks; one plan table drives every payroll.
- Production on Docker Compose + Caddy with Prometheus/Grafana monitoring, tag-based releases and EN/FR/ES localisation.

SKILLS

FRONTEND

React, TypeScript, React Native / Expo, TanStack Router & Query, Next.js, Vite, Tailwind, design systems, accessibility, performance

BACKEND & DATA

Node.js, Fastify, Express, REST & GraphQL, PostgreSQL, Prisma, Drizzle, Supabase, Strapi, Redis / BullMQ, Meilisearch

PLATFORM & DELIVERY

Docker, Caddy / Nginx, Vercel, Cloudflare, CI/CD, Playwright, Stripe, security hardening, monitoring

AI & AGENTS

Claude Code, Codex, Cursor, MCP servers, Claude API, agent guardrails, AI-assisted review

EXPERIENCE (CONTINUED)

KAAST

2022 – present

Co-Founder & Lead Frontend Engineer

Multi-tenant internal media platform – 5 client companies, 4,000+ users.

- Led the frontend architecture of the multi-tenant React/TypeScript platform: page composition, navigation flows and the product's interaction model.
- Built the shared component library that lets every tenant carry its own brand while the product stays one consistent, maintainable codebase.
- Search and routing with TanStack Router and Meilisearch; state and cache with TanStack Query; video delivered through Cloudflare Stream.
- Two-person Kanban team shipping customer-driven features inside tight audit windows, working directly with client stakeholders.

VUE D'ESPRIT — INDEPENDENT STUDIO

2010 – present

Freelance Lead Developer

Web, mobile and back-office products for startups, SMEs and associations – from discovery and data modelling to deployment and yearly maintenance contracts.

- **Com'Academy** – freemium iOS/Android learning app (Expo/React Native, Strapi 5): weekly-challenge engine, in-app purchases, ~30-page back office; in production across several graduate schools.
- **Horizon Planning** – multi-tenant crew-planning SaaS for construction firms (React 19, Express 5, PostgreSQL 17): tenant isolation tested with pgTAP, RBAC with audit log, installable PWA.
- **ASBA Drums, Domaine des Fournelles, AB2C, La Maison du Print, NP Ébénisterie** – brand sites with catalogues, secure admins (Supabase Auth, Strapi, Sanity, Payload) and order or lead flows.
- Security-hardened hosting and maintenance (Docker, UFW, Fail2ban, Vercel, Cloudflare) for long-running client platforms.

INTERCLOUD

2021 – 2022

Frontend Developer

SaaS dashboard for network-deployment workflows – joined at proof of concept, shipped the customer-facing MVP and V1.

- Built React interfaces that turned complex infrastructure operations into clear, maintainable product flows.
- Contributed to the shared UI layer, state and cache management, real-time events and search tooling.
- One of two frontend developers in a 10-person product team (backend, SRE, PO, PM) under fast agile delivery.

APPLE

Earlier

Technical Support & Product Testing

- Structured, user-focused troubleshooting in high-volume contexts; product testing and quality feedback loops.

LEADERSHIP & COMMUNITY

SOU DES ÉCOLES DE LA BÂTIE-MONTGASCON

2024 – present

President – nonprofit parents' association

- Lead a volunteer team running 7 fundraising events a year, securing €900+ per classroom for school trips and activities.
- Designed, built and run the association's website and operations back office: treasury, events, inventory, roles and audit log.
